COMPOSITE FRAME & BRICKMOULD

HIGH-DENSITY POLYURETHANE CORE

20-GAUGE STEEL LOCK PLATE
WHY PARAGON?

1. FINISHES
- **PAINT**: 21 standard colors from Sherwin Williams, (custom colors are available when a specific Sherwin Williams color code is provided).
- **COMMERCIAL GRADE PAINT FINISH**: All paint finishes undergo a slow oven curing process that brings the entire slab up to temperature to promote a stronger, more durable bond. Paragon’s painted finish has undergone the industry recognized crosshatch test for commercial-grade certification.
- **HAND-STAINED**: 8 stain colors that are carefully and patiently hand applied by the proud people of Louisville to highlight woodgrains and bring dimensions to slab designs and fosters constant quality control.
- **TWO-TONE GRIDS**: Paragon has the unique offering of Color Matched and Two-Tone Grids so that you can match the finish on both the exterior and interior sides of your new entryway. Most manufacturers only offer white internal grids for an incomplete and distracting appearance.
- **WARRANTY**: Backed by one of the strongest finish warranties in the industry.

2. GLASS
- **INSULATED GLASS UNIT**: Paragon offers a complete library of popular designer glass options, as well as our exclusive eMax high-efficiency glass.
- **FRAME**: Paragon’s exclusive xGen Glass Frame is a composite polymer frame that will match your doors interior and exterior finish, and is backed with the strongest glass frame warranty in the industry.

3. HARDWARE
- **SCHLAGE**: All Entry Systems come standard with Grade 1 Rated Schlage Hardware. The BEST hardware available for residential use.
- **WARRANTY**: All the Schlage Hardware comes with the ULTIMA LIFETIME WARRANTY covering mechanical defect and finish.
- **DESIGN**: Decorative Schlage hardware is available in: Bright Brass, Bronze, Antique Brass, Bright Chrome and Satin Nickel.
- **BALL-BEARING HINGES**: All Paragon doors come standard with ball-bearing hinges for a reliable and smooth operation. These hinges are also available in all Paragon hardware finishes for a consistent aesthetic accent.
- **ANCHORED HINGES**: Each ball-bearing hinge is machine screwed into an anchor mortised in the jamb for superior holding power.

4. FRAME
- **FULL COMPOSITE JAMB SYSTEM**: the Paragon jamb and brickmould are constructed with a Celuka composite that resists dents and scratches, and provides superior strength. This paintable and stainable material provides better fastening power than wood, resists rot and insects, and is backed by the strongest jamb warranty in the industry.
- **CUSTOMIZATION**: Available in custom depths of up to 12 1/2”.
- **SECURITY**: a full 12”x 4” 20-gauge security lock plate comes standard and provides superior security against forced entry.

5. SLAB
- **ENERCORE**: Every slab has a CFC-free High Density polyurethane core featuring a high strength-to-density ratio, providing better thermal, structural and sound deadening performance. Most manufacturers use a standard polyurethane or sheets of polystyrene.
- **DESIGN**: Available in smooth or woodgrain with architecturally correct stile and rail design.
- **PACKAGING**: Every Paragon door is individually wrapped and boxed to ensure maximum protection during shipping.

6. GUARDIAN SYSTEM
- **Q-LON WEATHERSTRIPPING**: A moisture-proof compression tested weather stripping that creates a perfect weather-tight seal between the door and jamb for maximum protection against air and water infiltration. Applied to strike, head and hinge sides.
- **HYBRID-SWEEP**: Combines fin seals and oversized bulb seals to create the best performing sweep system in the industry against water and air infiltration. Mechanically fastened to stay in perfect alignment to guard against air and water infiltration.
- **STORM-BLOCK**: A compression pad prevents water infiltration due to varying storm/atmospheric pressures.
- **COMPOSITE-BASED THRESHOLD**: Features an adjustable sill for consistent sweep contact with a full composite base that will not rot or warp. Continuous thresholds are available in widths of: 4 9/16” 5 1/4” 6 9/16”, while most competitors’ thresholds are extended with a separate piece, creating a seam that allows water to seep underneath the threshold and can promote rotting of wood in your entryway.
SOLTERRA STEEL DOORS

- 22-gauge steel slab has 30% more steel than the typical 24-gauge or 26-gauge “steel” door from the competition.
- HDG Technology - a hot-dipped galvanization process that forms a tightly bonded alloy coating to protect against corrosion and withstands the harshest of weather elements.
- Six sides of steel provides an industry leading PG40 Performance Grade commercially rated performance versus a PG15 from our competitors.
- Full composite, double bore lock block that features better fastening holding power and durability than typical wood lockblocks.
- Patented 16-gauge adjustable hinge plates that allow for fine tune adjustments of 5/8” up and down and 3/16” in and out to ensure a tight seal and post-installation adjustments to accommodate foundation settlement for years.
- Available with a maximum ASTM E-152 90-minute fire rating.
- Available in a variety of widths. Please refer to product chart for availability.

SOLTERRA FIBERGLASS DOORS

- High-impact compression molded fiberglass reinforced skins that resist the wear and tear of everyday use and remains unaffected by moisture and humidity.
- Hydroshield Technology, a complete moisture and humidity protection system essential for your exterior doors. While other entry systems are affected over time by wear, rot, and mildew, our unique barrier system protects against water infiltration and is durable against the elements.
- Two fiberglass reinforced skins are joined with full length composite top and bottom rails, plus full length composite hinge and strike stiles keep water/moisture from seeping into the door and helps prevent the build up of mold or mildew. Most competitors’ “fiberglass” doors are sandwiched around vulnerable wood stile and rail systems.
- Full composite hinge and strike stiles provide 200% the fastening power of typical wood stiles for maximum security of hardware, locks, and hinge assemblies.
- Full length, 2” LVL vertical style on the strike and hinge sides to provide maximum hinge security and full facilitates the type and placement of any hardware assembly. Most competitors feature only a 20” standard wood lockblock.

Door shown finished with a custom paint color.
Paragon has an exclusive Expanded Paint Finish Program, which broadens our palette to encompass the entire Sherwin Williams color spectrum. Visit your local Sherwin Williams retailer and choose from their over 1,500 standard paint colors. Colors chosen from the Sherwin Williams collection will carry the same warranty as Paragon’s standard finishes shown here.

Additional lead time is required for Sherwin Williams colors that are not included in Paragon’s standard offering (shown above).
Paragon offers sixteen unique decorative glass options for the Creso and Solterra door lines. Not only does each pattern lend itself well to a particular architectural trend or decorator style, but they also meet varying degrees of privacy.

The eMAX Energy Glass System offers maximum energy efficiency by combining Paragon’s special energy glass with dual Low-E coatings, Argon gas fill between the panes, and the use of a warm-edge spacer system in the IGU. eMax Energy Glass provides extra insulation between dual pane glass while blocking harmful UV rays, ensuring excellent energy performance.
Paragon offers the unique option to match the Internal Grids of your new door to the exterior color, interior color, or both! Choose a basic Color Match or Two-Tone for the perfect complement.
INTERNAL BLINDS

BLINDS ARE SEALED BETWEEN THE PANES OF GLASS; NO EXPOSED CORDS

PROTECTED BY THE ULTIMA™ ANTI-TARNISH WARRANTY
Made of the toughest door components available, all engineered to work together, the GUARDIAN™ system protects your home from the harsh, often unexpected, elements Mother Nature dispenses. The GUARDIAN™ system shields your home from weather-related rot and insect damage, while making your home more comfortable and energy efficient year-round.

1. Composite jambs provide anti-wicking barrier to discourage rot and insects and offer better finish quality and durability than typical wood jambs.

2. Durable Q-Lon™ compression weather stripping creates a perfect weather-tight seal between the door and the jamb for maximum sealing against air and water infiltration.

3. Adjustable composite rail with patented flexible seal interlocks with high dam aluminum sill for an impenetrable barrier between the threshold and the interior of the house.

4. Adjustable oak-look composite threshold allows simple height adjustment to create a perfect seal between the door and threshold eliminating voids or gaps that lead to water or air infiltration.

5. Alternating bulb and fin seals on the bottom door sweep offers superior protection against air infiltration while diverting water away from the door and threshold.

For double entry configurations, Paragon utilizes an astragal with a patented three-point sealing system that eliminates the air and water leakage problems common with many double doors. This specialized system enlists a specially designed corner pad for proper weather sealing, a patented “floating” seal that lifts with the flush bolt to prevent excessive rubbing and wear, and an all-aluminum body for strength and security. In addition to the efficiency benefits, the Paragon astragal also features a steel lock reinforcement plate for the top flush bolt that provides added protection against forced entry.
**ALLURE STORM DOORS**
